

BATH ALARM

Visit us at
www.heatandplumb.co.uk

Suitable for all baths
To monitor the level and
temperature of the
bath water

- Alerts you when your bath is full with a beeping noise
- Temperature readout in Celsius or Fahrenheit (selectable)
- Additional probe to check the water temperature

Installation instructions

- Remove Bath Alarm from its packaging and unscrew the cover to expose the battery compartment.
- Remove the plastic film display covering the readout window on the front of the unit.
- Fit the enclosed batteries taking care to observe the polarity.
- Once the batteries are fitted, the display will come on.
- Press the small button next to the battery compartment to select Fahrenheit or Celsius temperature ranges.
- Refit the back cover taking care not to over-tighten the cover
- Wet the sucker on the rear of the starfish and attach it to the inside of the bath at the desired water maximum level you require
- Once the water level is reached the alarm will sound
- To use the temperature probe simply remove the **rubber seal** on the unit and plug in the probe. Within seconds the temperature of the water is measured.
- Although Bath Alarm is waterproof and safe in the bath, care should be taken to insert the **rubber seal** when the temperature sensor is not in use.

Water Level sensors
