TAPS & SHOWERS

Installation Instructions & User Guide

Please leave these instructions with the end user

Product code: Z2 BIB C

D4

Specifications

Dynamic Water Pressure
Min: 0.5 bar Max: 5.0 bar

Maximum Static Pressure: 10.0 bar
If the supply pressure is above 3 bar, a pressure reducing valve must be fitted

Maximum Operating Temperature

60-65°C recommended

The Flow Valve is timed and will shut off in 15 ± 5 seconds

*This will vary depending on system pressure

Inlet Connections

1/2" Male BSP Tap connector

5/Ltr Flow Regulator Pre-Fitted

Tools You'll Need

Cross screwdriver

Adjustable spanner

Pipe cutter

Cordless drill

Prior to Installation

All products manufactured and supplied by Bristan are safe provided they are installed, used correctly and receive regular maintenance in accordance with these instructions.

This product has been tested to the Water Regulations Advisory Scheme (WRAS) and satisfies the requirements of the Water Supply (Water Fittings) Regulations 1999 and current bylaws. For full Installation Requirements & Notes (IRN) please visit wras.co.uk/directory.

We recommend isolation valves to be fitted to the inlet water supplies to ensure ease of future maintenance. Before installing these taps the water supply must be thoroughly flushed in order to remove any swarf, solder etc.

This product must not be modified in any way as this will invalidate the guarantee.

Pack Contents

Basket Filter washer x1

Flow regulator x1

Indices x2

Spare Parts For Your Tap

To replace any spare parts for your tap, why not scan the QR Code or visit www.bristan.com and search for your product.

Installation

1

Rear access will be required

Drill hole in the wall

2

Place plinth over the hole ensuring the washer is under the plinth

3

Secure the taps to the wall by using the washer and metal backnut.

4

Important
If the supply pressure is above 3 bar a pressure reducing valve must be fitted

5

Please ensure that the correct colour indice is fitted

6

Turn on water supply

Turn on water supply for a few minutes and check all joints and connections for any leaks.

Operation

Push down to get flow of water

Maintenance - Cartridge Cleaning

1 **Important**
Prior to doing any maintenance or servicing the isolation valves **must** be turned to the closed/off position.

UnscREW the grub screw in the handle.

Remove handle.

2
Pull out the valve from the tap body.

3
Using a flat screw driver, remove the spring and spline.
Rinse and leave to one side.

4
Clean the seal around the valve and apply silicon grease.
Remove valve from the casing.

5
Check that the groove is clear of any debris on the inside of valve casing.

6
Assemble the valve, apply grease and place back into the tap body.
Replace handle.

General Cleaning

Your fitting has a high quality finish and should be treated with care to preserve the visible surfaces.

All surfaces will wear if not cleaned correctly, the only safe way to clean your mixer tap is to wipe with a soft damp cloth. Stains can be removed using washing up liquid. All bath cleaning powders and liquids will damage the surface of your fitting, even the non-scratch cleaners.

Note: Never use abrasive detergents or disinfectants or those containing alcohol, hydrochloric acid or phosphoric acid.

Troubleshooting

Symptom	Cause	Remedy
No flow or low flow rate	Partially closed isolation valve.	Open isolation valve.
	Instantaneous water heater cycles on and off as flow rate or pressure is too low.	Increase water flow rate or pressure through system.
	Head of water is below the minimum distance required.	5 meters minimum required.
	Hot or cold water being drawn off elsewhere causing pressure changes or instantaneous boiler temperature changes.	Do not use other water outlets when using the taps.
	Airlock or partial blockage in the supply pipework.	Flush through pipework to ensure removal of debris and any airlocks.
Water dripping from taps	This is normal for a short time after using the taps.	This is caused by residual water tension, the build up of water in the tap body.
	If water continues to drip, possibly due to the ceramic disc valves	Remove valves and clean, refer to 'Maintenance' section before starting any maintenance.
Taps do not turn on	Closed isolation valve.	Open isolation valve.
	Mains water supply turned off.	Turn on mains water supply.

Maintenance- Flow Straightener

1
Unscrew the flow straightener and soak in descaler.

2
Rinse the flow straightener.

3
Replace flow straightener into spout.

Notes

Please use this space for any notes you or your installer may have regarding the installation/plumbing of this product.

At Bristan, we want to make things as easy as possible for our customers. That's why we offer solid guarantees on all our products, effective from the date of purchase, to give you peace of mind.
