## Danfoss

# Data sheet Thermostatic sensors type RA 2000

RA 2922 is equipped with 2 m of ultra-thin capillary tube, which is coiled up within the remote

Ordering and specifications

RA thermostatic sensors

| Туре    | Code no. | Model   | Cap. tube           | Temp. range 2) |
|---------|----------|---|---------------------|----------------|
| RA 2910 | 013G2910 | Standard , built-in sensor                        | -                   | 5-26 °C        |
| RA 2914 | 013G2914 | Standard , built-in sensor, low temperature range | -                   | 5-22 °C        |
| RA 2912 | 013G2912 | Standard, remote sensor                           | 0-2 m <sup>1)</sup> | 5-26 °C        |
| RA 2916 | 013G2916 | Standard, remote sensor, low temperature range    | 0-2 m <sup>1)</sup> | 5-22 ℃         |
| RA 2920 | 013G2920 | Tamperproof, built-in sensor                      | -                   | 5-26 °C        |
| RA 2922 | 013G2922 | Tamperproof, remote sensor                        | 0-2 m <sup>1)</sup> | 5-26 °C        |
| RA 5062 | 013G5062 | Remote temperature adjuster                       | 2 m                 | 8-28 °C        |
| RA 5065 | 013G5065 | Remote temperature adjuster                       | 5 m                 | 8-28 ℃         |
| RA 5068 | 013G5068 | Remote temperature adjuster                       | 8 m                 | 8-28 °C        |

<sup>1)</sup> The remote sensor is delivered with all of the capillary tube coiled up within the sensor. When mounting the sensor, only the capillary tube required is uncoiled.

<sup>2)</sup> Temperatures stated for Xp = 2K, i.e. the valve is closed at 2 °C higher room temperature.

#### Data sheet

#### Thermostatic sensors type RA 2000

#### Accessories

| Product  | Code no. |
|--|----------|
| Manual setting knob for RA valves, plastic                       | 013G5002 |
| Limiting pins for tamperproof sensors (30 pcs.)                  | 013G1215 |
| Limiting pins for built-in, remote and service sensors (30 pcs.) | 013G1237 |
| Anti-theft plugs (20 pcs.)                                       | 013G1232 |
| Scale cover for RA 2920/22 (20 pcs.)                             | 013G1672 |
| Toolkit, Allen key & locking pin tool                            | 013G1236 |
| Adaptor for RA 5062/65/68 to RAVL valves                         | 013G5192 |
| Adaptor for RA 5062/65/68 to RAV valves                          | 013G5193 |

#### Setting the temperature

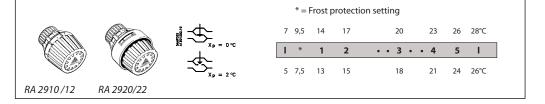

The required room temperature is set by turning the setting dial. The temperature scales show the correlation between scale values and the room temperature. The temperature values stated are for guidance only as the obtained room temperature will often be influenced by installation conditions.

The temperature scales are stated according to European standards at  $Xp = 2^{\circ}C$ . This means that the radiator thermostats close at a sensor temperature which is  $2^{\circ}C$  higher than stated on the temperature scales.

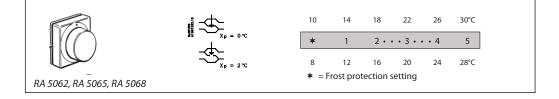

Locking and limitation of the temperature setpoint of RA sensors are carried out using the limiter pins placed at the back of the sensor.

Locking and max/min limitation of the remote temperature adjuster type RA 5060 are carried out by the limiter tabs. The limiter tabs will be covered by the setting dial.

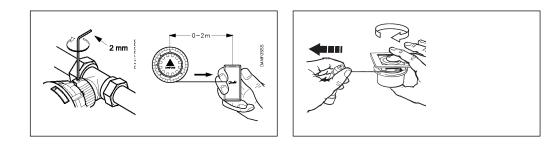

The procedure is described in the instruction.

#### Mounting

Jank

Thermostatic sensors type RA 2000

#### Choose the right sensor

The thermostatic sensor should be selected on the basis of the following criteria:

The sensor must always be able to register the temperature of the ambient air.

Radiator thermostats with built-in sensors These should always be fitted horizontally so that the ambient air can pass freely over the sensor. Danfoss does not recommend the fitting of a built-in sensor in vertical position because heat effect from the valve body and possibly surface pipes will cause incorrect operation of the thermostat.

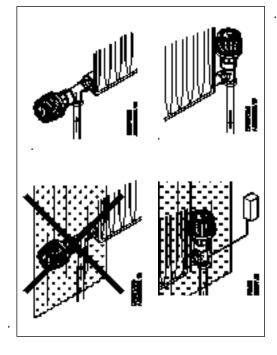

*Radiator thermostats with remote sensor* These should be used when:

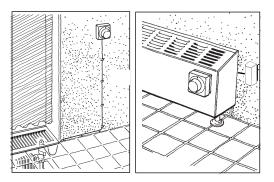

- Curtains cover the sensor
- Sensor is affected by surface pipes
- Sensor is affected by draught

 It is necessary to mount the sensor in vertical position if there are adjacent obstructions.
 The remote sensor must be mounted on the wall, away from curtains, or on the skirting board beneath the radiator if free of surface pipes. All remote sensors are now supplied with ultra-thin capillary tube. Simply pull out the length required (2 m maximum) and fix using clips provided or special tacker gun.

Radiator valves with remote adjustment The remote temperature adjuster is used on radiators or convectors which are hidden in a cabinet or in other ways inaccessible to the user. In addition, the room temperature adjuster is used in integral sockets and installation ducts. The sensor and the setting part of a remote setting unit are integrated.

The remote temperature adjuster is placed in an easily accessible place where the ambient air can at the same time pass freely over the sensor. This is ideal where the valve is inaccessible to the user. The temperature adjuster should be mounted between 1.2 and 1.6 m above the floor.

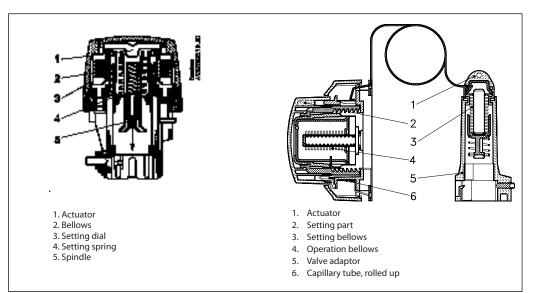

#### Data sheet

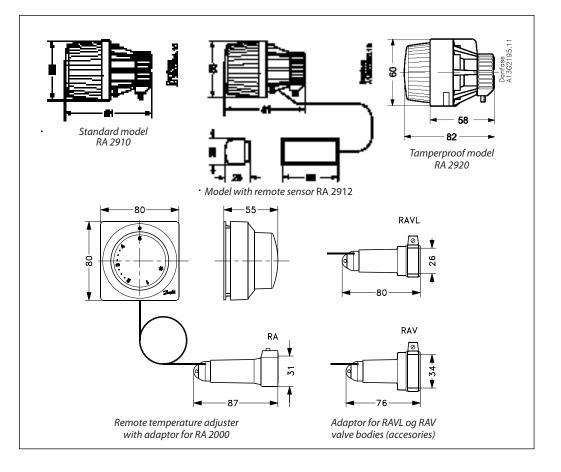

Thermostatic sensors type RA 2000

#### Sensor operation principle

Max. ambient sensor temperature: 60°C.

#### Dimensions
