For pricing and data on larger radiators please contact the Sales Office.

Centre (c1) = number of sections x 76mm + 20mm

STEP BY STEP GUIDE: HOW TO BUILD A CAST IRON RADIATOR

1. Measure the width and height of the space you have to fit the radiator in or calculate the output you require in your room
2. Use the tables above to work out which radiator fits your size requirements
3. Check how many retaining stays are required
5. Ensure you have a joining key to check all joints are tight before installing
6. If radiator comes out over 12 sections you will also need the joining key to join the sections together, all other joining accessories will be supplied
7. Decide if you want the radiator painted and if so pick a colour from the RAL chart on pages 6-7
8. Place your order with your local supplier
