The pin is only visible on one side
and should be facing up on the top
hinge and down on the bottom hinge.

15

Stand inside the enclosure and lift the door onto the spacer blocks and secure with fitting aids provided.

16

17

17A

The door should be touching the fitting tool to set the correct gap.

18

18A

DO NOT OVERTIGHTEN!

19

Adjust the height of the door using spacer blocks to ensure door is level with the hinged fixed panel.

20

20B: Using only the Hex key provided fully tighten all hinge bolts to their absolute limit. Anything less than this could cause the door to drop over time.

Note: Screws need to be tightened to the Max and its normal to hear a 'clicking' noise.

Wait 10 minutes then tighten all bolts a 2nd time. It is necessary to do this as the hinge gasket will compress slightly after the 1st tightening.
