The Telford Typhoon is a rapid recovery cylinder with robust corrosive resistant properties. Using a large, high efficiency coil, the Typhoon can recover quicker than your conventional indirect cylinder. This makes it a great product for installations where the capacity required cannot normally be achieved due to size restrictions, the cylinder can almost reheat at the rate hot water is being drawn off.

In addition the Typhoon is made from a higher grade of copper to give added lifespan to the product and as with all our copper cylinders it comes with a 10 year manufacturers guarantee.

## Heat Up Time

Predicted heat up times for cylinder based on test procedures defined in BS1566:2002 for type P cylinders.
